

Website Visibility & Organic Growth Report

Heroes Home Network · Prepared for Zack Tarbet · June 2026

Summary

We upgraded how the website is understood by Google and by AI assistants (ChatGPT, Google's AI answers, and similar tools) — without changing anything visitors see. The site is now easy for search engines to find and read across all 145 military base pages, and our most valuable content is structured so it can be pulled directly into search results and AI answers. This report lists what's now live and our plan to grow free, organic traffic.

What We Changed (now live)

Found by Google. Built a complete, auto-updating map of every page and handed it to search engines, added indexing instructions, and gave each page one clean web address so Google never splits its credit across duplicate versions.

All 145 base pages optimized. Every installation page now has a unique, search-friendly title (e.g. "Fort Carson — PCS, Housing & VA Loans in Colorado Springs, CO"), real location and map data, and key facts (home prices, rent, school district) tagged so search engines and AI tools can read them.

Built for AI answers (AEO). Our FAQs are now "answer-ready" so Google and AI assistants can quote them directly. The business is formally identified — Heroes Home Network, NMLS #2040562, phone, all 50 states — and our VA loan, PCS timeline, and Fort Carson guide are structured as trusted, authoritative content.

Professional when shared. Links shared by text, email, or social now show a proper title, description, and the Heroes Home Network logo instead of a blank box.

None of this changes the look or content visitors see. There are no new costs, no new logins to maintain, and nothing for you to manage — it simply makes the site easy for the world to find.

Why It Matters

More people now get answers straight from AI assistants and Google's instant-answer boxes, often without clicking a website. Content that isn't structured for those tools is invisible to a fast-growing share of searches — and most independent VA loan and PCS sites aren't set up for it. We now compete in both traditional rankings and the new AI-answer landscape. The military niche is a real edge: PCS demand is predictable and repeats yearly, and a page about one base in one town is far easier to rank than a generic "VA loans" page fighting national banks.

Our Plan to Grow Organic Traffic

Phase 1 — Foundation (Complete). Everything above. The platform everything else builds on is done and live.

Phase 2 — Content that ranks (1–3 months). Build in-depth guides like the Fort Carson page for the top 10–15 duty stations, plus short articles answering real PCS and VA loan questions families search for. Each one is a new way to be found.

Phase 3 — Local presence & authority (2–5 months). Set up a free Google Business Profile for map results, start collecting reviews (a top local-ranking signal), and earn links from military spouse groups, realtor partners, and PCS resources.

Phase 4 — Measure & double down (ongoing). Connect Google Search Console to see exactly what people search to find us, track which bases and topics win, and review quarterly.

SEO is a build, not a switch — new pages typically gain traction in 2–4 months, then grow steadily. The foundation is done; the next 90 days of content is where momentum shows.

What We Need From You

1. Confirm the official website address (final domain).
2. Approve setting up free Google Search Console and a Google Business Profile.
3. Share the 10–15 most important bases so we build their guides first.
4. Confirm where contact-form leads should go (email or CRM) so none slip through.

Bottom line: the site is now built to be found — by Google and the AI tools more people use every day — across all 145 bases we serve. The foundation is complete and live. A focused content and local-presence push over the next few months turns it into a steady, no-ad-spend stream of PCS and VA loan leads.
